APPEARANCES ANDREW J. FRISCH GARY VILLANUEVA AMANDA BASSEN Attorney for Defendant Bonventre ROLAND G. RIOPELLE Attorneys for Defendant Bongiorno ERIC R. BRESLIN MELISSA S. GELLER Attorneys for Defendant Crupi

- O. Ms. Crupi was helping you prepare these documents for KPMG 1
- 2 London coming back in?
- 3 A. Yes.
- Let's look at what is in evidence as Government Exhibit 4
- 5 105-C171. Can we go slowly through the three pages of this
- document, Ms. Baskin. 6
 - Do you see those three pages, Mr. DiPascali?
- 8 A. I do.

7

- 9 What are we looking at?
- 10 The first page is something that I probably printed to get Α.
- 11 a handle on what the industry standard would be in order to
- 12 collateralize an option position. I don't know what manual I
- 13 took that from. It might have been from the Internet, it might
- have been from Bear Stearns, it might have been from any number 14
- 15 of sources. The point of what I would be reading there would
- 16 be how to margin or collateralize an option. This is the
- 17 calculation. That box in the middle was the answer to my
- 18 question.
- 19 Whose handwriting is on this page?
- 20 Α. Mine.
- 21 When you say collateralize, does that mean in essence to
- 22 back up or to offer some protection to your counterparty?
- 23 Exactly that. A.
- 24 Now can we go to the second page of this document. What is
- 25 this that we are looking at?

A. It's a spreadsheet that I created that was going to be the nuts and bolts of this exercise. It was going to do a lot of the calculation for me and allow the process to progress swiftly instead of from month to month to month and client to client to client calculate all sorts of stuff, and then have to then create another side to that.

This spreadsheet, which is an Excel-based spreadsheet, is identifying certain treasury bills across the top column.

The top row is the CUSIP of treasury bills and options. The second row are the symbols of options and then a string of treasury bills.

Going on the far left column are a string of account numbers. Those are the accounts that Bernie told us he wanted to use to be the counterparties of the customer option positions. What this is doing is it's allowing me to randomly assign, once I know the total of my customer option positions, a quantity to each of those counterparties. Then, once I've randomly defined what each counterparty's position is, this is calculating what its margin or collateral requirement would be.

Once I established that, this spreadsheet allows me to randomly pick a group of treasuries that were going to represent that collateral, and then the whole total number would circle back to what I needed. It's fairly complicated, but it did all the grind work necessary to accomplish what Bernie wanted.

- 1 Were any of the treasury bills that are reflected on this
- 2 real?
- 3 A. No.
- Would it be fair to say that this essentially divvies up 4
- 5 amongst the client accounts Mr. Madoff provided to you to
- 6 collateralize the other sides of the option trading, that this
- 7 document divvies up the treasuries going to each one of those
- 8 accounts?
- 9 A. It first divvies up what their theoretical option position
- 10 would be, and based on that it assigns an array of treasuries
- 11 that would collateralize it.
- 12 O. Let's go to the next page. Can we blow up the relevant
- 13 part of this. What does this document show?
- Those same account numbers that were in the far left column 14
- 15 going down in a grid with a series of checks.
- 16 0. Have you ever seen this document before?
- 17 Briefly. Α.
- Whose handwriting is on this document? 18
- 19 Jodi's. Α.
- 20 Looking at the checks, do you understand what those
- 21 reflect?
- 22 Not exactly, but in concept yes. Α.
- 23 What in concept does it reflect? Q.
- 24 It's got something to do with how many times --Α.
- 25 MR. BRESLIN: Objection.
